🔧 Work Progress Report

Name: Ishimwe Serge
Position: Software Developer
Date: 23rd July 2025, 10:45 PM CAT

📝 Introduction

This report outlines the tasks I completed today as part of improving the **Aby Inventory System** and the **Abyride Client Mobile App**. The work focused on setting up and updating essential frontend tools for inventory management, and enhancing core client features in the ride booking flow.

✅ Key Tasks Completed

1. Work on ABY Inventory System

- Worked on the `aby_inventory` system by **adding all necessary frontend dependencies** required for development.

- Integrated tools and libraries needed for UI development, routing, and state management.

- **Pushed the latest changes** to the `invento_systme` project branch on GitHub for team collaboration and tracking.

---

2. Enhancements on Abyride Client Mobile App

- Ensured that **clients can successfully request rides** through the app interface.

- Implemented and tested the feature allowing clients to **view available drivers** near their location.

- Focused on refining the ride experience and improving feedback during the ride booking process.

📌 What's Next

- Continue UI work on the inventory system: item listing, search, and filters.

- Improve mobile-side **driver-client interaction** and loading experience.

📚 Summary

Today's progress laid a strong foundation for the **Aby Inventory System** with proper frontend setup and GitHub syncing. On the mobile side, I made solid improvements to **client ride functionality**, ensuring a smoother booking experience and better driver visibility. Excited to build more on these next steps!
